Existing appearance

Bell & Spina provided several elevation concepts as to address water infiltration issues and update the aesthetics at the Winding Ridge residential complex. The solution called for the removal of deteriorated infill walls on front and rear elevations. A hard moisture-resistant exterior finish was required at the base to prevent damage caused by water infiltration. Each concept gave an enhanced new look to the complex using a variety of materials while solving the basic water infiltration issues.

Concept 3 was selected by the University.
